

To improve the key skills of students, it is important to implement targeted actions, such as the use of innovative teaching methodologies, personalization of learning, and integration of educational technologies. Furthermore, promoting the development of transversal skills, such as collaboration and problem-solving, will help prepare students for future challenges.

## **COMMUNICATION**

To create a report, we're going to follow these steps: start with an introduction, continue with the development of the collected data, conclude with a summary of the results and recommendations. Don't forget to include a bibliography and use visual materials to facilitate the understanding of the data.

## **VALUE FOR THE COMMUNITY**

Improving the key skills of students has significant value for the community. Quality education contributes to forming more prepared and competent citizens, ready to face complex challenges. This can lead to a more informed, innovative, and cohesive society, with individuals capable of positively contributing to the economic, social, and cultural development of the community as a whole.
