Brief description of your civic monitoring research (summarise the research into 140 characters and choose 5 keywords to describe it)	**Contextual information**: what data did you find on your reference theme? (See slide: find contextual data and information)	**Chosen project and theme** (name, brief description, theme)	**Experts on the theme** to be involved from the territory (associations, public authorities, other experts, journalists etc.)	**Communication format and involvement strategy** (Which format do you choose to communicate your research and which strategies do you implement to involve the local community. See slide: choose the righ format)
We entered the Opencoesione website, navigated in the → data → browse data section, searched for our region (Lombardy) and then the province (Brescia), selecting a municipality close to ours. We selected the municipality of Sirmione (BS) by investigating the "Energy" item, where we found our theme: *"Interventions to improve the energy efficiency of public lighting systems in the municipality of Sirmione".* We chose this theme because the amount of expenditure foreseen for the project seemed to us to be high. The intervention also took place in the municipality of Sirmione using mostly money from the European Union and not from the municipality itself. We would like to have the opportunity to understand why these choices were made. Keywords: 1) high cost 2) lighting 3) efficiency 4) sustainability 5) energy savings	The work concerns interventions that improve the energy efficiency of the municipality of Sirmione. The cost of the intervention was 489.596,28 euro, of which the European Union has contributed with 195.838,51 euro; while the country has contributed with 293.757,768 euro and the Lombardy with 979 euro. It was expected to start on October 19, 2009 but finally started on December 13, 2010, almost a year later and ended on December 31, 2011. CUP:F54I08000010006	**Enlightenment saves us** *This is the title that we chose for this work* Interventions to improve the energy efficiency of lighting systems in the municipality of Sirmione Topic: energy management	-Municipality of Sirmione - administration office -Lombardy region -European Union	Dissemination of information through the publication of presentations, research and videos/interviews that clearly explain the information collected. Send emails, call for more information and search for information on the internet.

Additional research: choose 3 additional research methods (see slide: **choose a research method**)
1) Focus group
2) Content analysis
3) Diaries or registries

Value for the community: how will your research have an impact on your territory? Which effects and further developments could your research trigger? Which categories of people could it interest?
Our research could have a negative impact if it were discovered that the money was not used correctly and therefore could trigger a problem for the municipality's popularity. However, if the research has good results and the money has really been used to improve the efficiency of the municipality, this will have a positive outcome for the citizens.
Our research will certainly interest different categories of people: not only citizens but also tourists who come to this citadel every year.
