- . Employees
- . Environmental Associations (WWF)
- . Citizens

Contextual information

- National Websites
- Local websites
- Research Institutes websites
- National and local web portals
- Online Newspapers

Additional research:

- Interviews
- Surveys
- Focus Group

Value for the community:

Our research could make citizens be aware about public and European funds, useful for our community. People could get informed about the importance of the presence of a river in a town.

If the river ecosystem was respected, the city could take many advantages especially for tourism, watersports and fishing. It could be interesting both for ordinary people and the town administration, since its safety could improve everyone's life quality.
